

# PUT IT TO THE TEST

## 10 SIMPLE PURIFICATION FEATS FOR HEALTHIER INDOOR SPACES

***DID YOU KNOW*** that many health problems could be related to indoor air quality? Americans spend about 90% of their lives indoors where dust, allergens, germs, viruses, and mold can build up within the confines of buildings and homes. Although the effects are not always immediately noticeable, the pollutants that fester in your indoor air can contribute to conditions like asthma, allergies, skin irritations, fatigue, and even cancer.

**Grab your SafeAir™ Mini X2 Air Purifier and take your typical cleaning routine to the next level with these 10 Customer Approved Purification Feats to demonstrate immediate results and help expedite the purification process for your home, vehicle and more!**

# **PURIFY YOUR AIR VENTS**

**Ventilation and HVAC systems are the "lungs" of your home, and it's important to keep them clean. Follow the steps below to use to give your home a breath of fresh air!**

- 1) Place your purifier directly in front of and facing the cold air return or intake of your ventilation system. You will need to use the USB cable or an extension cord to do this.**
- 2) Turn the air purifier on and adjust to the highest ozone level setting.**
- 3) Turn on your heating/cooling system fan from your wall thermostat.**
- 4) Allow this setup to run undisturbed for at least 12 hours to refresh your home's ventilation. If you have multiple units, you can repeat this set up throughout your home.**

***PRO TIP* - Untreated duct work can cause breathing disorders and other health issues. Include this process into your seasonal deep cleaning routine to keep your ventilation system and your family healthy.**

# **SANITIZE YOUR MATTRESS**

**How much is a good sleep worth? Using your Safeir Mini to purify your mattress has the potential to give you the best night's sleep ever! Give your bed that just washed feeling with these simple steps:**

- 1) Pull the blankets back to expose the mattress and position your purifier at either the foot or head of the bed. You may need to use the USB adapter or an extension cord to power the unit for this process.**
- 2) Turn your air purifier on and adjust the control dial to the maximum setting.**
- 3) Cover your purifier and bed with a light sheet to make a "tent" over the entire bed. Close the door of the room and allow the purifier to run for 2-4 hours.**

**PRO TIP - A good sleep is essential, and sometimes irritating indoor air pollutants can keep us from getting a good night's rest. Operate your air purifier on SLEEP MODE (See Page 8) while you rest to help remove allergens from your bedroom so you can breathe easy and wake up feeling refreshed!**

# **MOLD BLAST YOUR BASEMENT**

**The activated oxygen that is released by SafeAir™ Mini X2 is a natural mold eliminator. This process will amaze you as your nasty, moldy and mildew smelling basement is transformed and rejuvenated.**

- 1) Place your purifier in the center-most area of the basement about 5-6 feet above the floor or as high as possible.**
- 2) Turn the air purifier on and adjust the to the highest ozone level setting.**
- 3) Place an additional fan in the room if necessary to circulate the activated oxygen to every corner of the basement if the airflow is stagnant.**
- 4) Allow this set up to operate for 6-8 hours for mild/moderate problems, or 2-4 days under supervision for serious mold and mildew.**

***PRO TIP* - Remember not to let your purifier operate in an area with excessive moisture or humidity. Keep the unit off the ground and as close to the ceiling as possible. You may need to run a dehumidifier first if the basement environment is very damp.**

# **CLEANSE YOUR BATHROOM**

**Flush the germs down the toilet! This step can help reduce that nasty mold and mildew, as well as help you keep those gross, infectious germs and bacteria from taking over your bathroom, and leave it smelling fresh!**

- 1) Place your air purifier in a central area of the bathroom, like a dry countertop. Be sure to keep it off of the floor, away from water or wet towels.**
- 2) Turn the air purifier on and adjust to medium or high level depending on the size of your bathroom area.**
- 3) Close your bathroom door and allow the air purifier to purify the space for at least 2 hours.**
- 4) To allow freshness on a regular basis, simply plug in your SafeAir™ Mini X2 into a bathroom power outlet and set the dial to a medium level.**

***PRO TIP* - Don't forget that too much moisture or humidity can harm your air purifier. Never operate the purifier while bathing or showering. Wait until all steam and humidity has subsided before reinstalling.**

# FRESHEN YOUR FABRICS

**This step can help you eliminate that stale, musty smell from your closets and other storage spaces, as well as help oxidize harsh chemical toxins from your clothing after washing with laundry detergent or dry-cleaning services.**

- 1) Place your air purifier in the center of the closet, as close to the ceiling as possible. You will need to use the included USB power cord or an extension cord to power the unit.**
- 2) Turn on your air purifier and adjust to a medium level setting for small closets, or high level setting for walk in closets or larger storage spaces.**
- 3) Close the door of the closet or storage space and allow this setup to run for 2-3 hours, depending on the storage volume of the space.**

***PRO TIP* - For direct purification and odor removal on a specific article of clothing, put the item in a garment bag or a box and place the unit inside the bag. Attach your purifier to a power source and adjust the dial to a medium level setting for 10-15 minutes.**

# DEODORIZE STINKY SHOES

**Stinky feet and shoes are no match to the odor fighting power of SafeAir™ Mini X2 Air Purifier! As another fan favorite, this step is an easy and fast way to eliminate the stench from your gym shoes or work boots!**

- 1) Place your smelly shoes or boots inside a shoebox or any other small enclosed space like a box, bin or suitcase.**
- 2) Attach your air purifier to the included USB power cord, or an extension cord and place the purifier inside of the box along with your shoes or boots.**
- 3) Turn the air purifier on and adjust the settings to the highest ozone level.**
- 4) Allow this process to operate for 30-60 minutes, depending on odor level, allowing the powerful fresh air molecules to saturate your smelly shoes.**

***PRO TIP* - Does your gym bag reek? Instead of a shoebox, simply place your SafeAir™ MINI X2 purifier inside your gym bag to remove the odors left behind by shoes or workout clothes.**

# **KNOCK OUT THE TOXINS**

**The process of refreshing your home's look can often come with a big mess! This purification feat can help reduce and eliminate those extremely hazardous toxic fumes and dust created in your home during and after you paint, lay carpet, or install cabinetry.**

- 1) Place your air purifier in the center-most area of the room and off the floor. You will likely need to use the USB cable or an extension cord to power the unit.**
- 2) Turn on the purifier and adjust the dial to a maximum level setting.**
- 3) If possible, place a fan in the room to help circulate the activated oxygen to every corner of the room.**
- 4) Allow this set up to run as long as needed until the smell and fumes from your remodeling has diminished.**

**PRO TIP - While your air purifier can help to reduce toxins once the job is done, be sure to use precautions such as masks, or other forms of ventilation while working with paint, dust and fumes.**

# TAME YOUR PETS ODORS

Wet dog? Stinky litter box? Your SafeAir™ Mini X2 Air Purifier has got you covered. Although our pets are part of the family, their odors can be less than loveable. This purifying feat is a customer favorite and helps eliminate the often obnoxious smell that can be left behind by our furry friends.

- 1) Place your air purifier in front of the affected area as closely as possible. Common problem areas can be around the litter box, pet beds, furniture, or near your pets crate or carrier.
- 2) Turn on your air purifier and adjust to the highest ozone level settings.
- 3) Run the purifier for 2-12 hours depending on the potency of the odor. Let your nose be the judge!

**PRO TIP -** Accidents happen. To purify a stinky spot, create a “tent” over the area (See “Sanitize Your Mattress” Instructions). Remember to leave the back of the purifier open to allow air to come to it and produce activated oxygen to fight stubborn odors.

# REFRESH YOUR RIDE

Practicing this simple purification feat can help reduce that stale smell your car gets as it ages, as well as help eliminate stubborn odors left behind by a smoker or a pet passenger.

- 1) Plug your air purifier into your car's USB outlet and place it on the front seat, dashboard or center console.
- 2) Adjust the settings to medium or high ozone level, depending on the size of the vehicle.
- 3) Turn on your vehicle's air conditioning to help better circulate the purifying molecules throughout the space.
- 4) Allow this setup to operate while the vehicle is unoccupied for 30-60 minutes.

**PRO TIP** - Follow this purifying process on all of your vehicles - from boats to RVs, SafeAir™ Mini X2 will help eliminate odors and germs and keep your spaces fresh!

# **PURIFYING ON THE GO**

**While your hotel or rental space might appear to be clean, there are potentially millions of hidden germs, bacteria and viruses lurking in the air and on surfaces. Take advantage of the compact size of SafeAir™ Mini Air Purifier and take it along on all your vacations and adventures!**

- 1) Pack your SafeAir™ Mini X2 Air Purifier in your suitcase or backpack - Don't forget the USB power cord!**
- 2) Follow the instructions for the previously listed purification feats to sanitize the mattress, bathroom, or simply just plug it in and adjust to appropriate level control settings based on the room size.**
- 3) Spread the word about SafeAir™ MINI X2 to friends, family and those you meet along your journey!**

***PRO TIP* - Don't get too comfortable in your hotel room! One study published in Scientific American magazine found that approximately 81% of common surfaces swabbed in a hotel room had at least "some" fecal bacteria. Take a few minutes to disinfect before settling in.**
