

"An Ounce of Prevention is Worth a Pound for a Cure!"

Before putting your SafeAir™ Ultra in a central area of your home for continuous use, try out these recommended purifying feats from the inventor for ultimate healthy home results!

Clear the Lungs of Your Home

Place your SafeAir™ Ultra near your central air intake and set the coverage settings to 3,000 square feet. Set your thermostat to "AUTO" and allow the unit to run overnight to saturate the interior of your home's ventilation and destroy odors, germs, mold spores, and create healthier air in every room!

For Best Results, Keep Your Thermostat Set to AUTO for Continuous Air Circulation and Clean Air Purification Through Your Home!

Don't Let the Bed Bugs Bite!

Did you know your mattress is one of the dirtiest surfaces of your home? After removing bed linens, position the unit at the foot of the mattress with the rear facing open air. Create a tent-like enclosure using pillows and a loosely draped sheet, then run the purifier on high for one hour to effectively neutralize dust mite debris, odors, mold and allergens.

Moldy and Musty and Mucky - Oh My!

Even the cleanest homes can have mildew and mold lurking in the basement! Position your SafeAir™ Ultra on a sturdy surface away from the floor and areas with excess moisture. For best results, set the coverage to 3000 square feet and operate the unit for 24 hours to reduce musty odors, mold spores and mildew and germs!

Purify Here, There and Everywhere!

Place your SafeAir™ Ultra on the floorboard or sturdy surface in your car, RV or boat interior and set the coverage to 3000 square feet for 1 hour to remove embedded odors and germs, and restore overall freshness in your vehicle.
